Question 1

1 / 1 pts

An employer is expected to update the facility-specific exposure control plan for all of the following EXCEPT

☒ Six months have elapsed since it was last updated

☐ As better information, procedures, or equipment become available

☐ As job requirements change

☐ As employees change

Question 2

1 / 1 pts

True or False? The person to notify in the event of an exposure incident is always the direct supervisor.

☐ True

☐ No answer text provided.

☐ No answer text provided.

☒ False

Question 3

1 / 1 pts

Biological waste cannot be stored in healthcare settings accessed by the public longer than _____.

☐ One week

☒ 24 hours

☐ Thirty days

☐ Four hours

Question 4

1 / 1 pts

Epidemiology is:

☐ The bloodborne pathogen standard

☐ The signs and symptoms that will show if the employee develops a BBP infection

☒ The medical science behind tracking and controlling bloodborne diseases

- ☐ A layer of the skin

Question 5

1 / 1 pts

What is usually the first action in the event of an exposure incident?

- ☐ Seek medical treatment
- ☒ Wash the area thoroughly
- ☐ Complete an incident or accident report
- ☐ Notify appropriate personnel

Question 6

1 / 1 pts

Healthcare workers are the primary population required by OSHA to receive training on bloodborne pathogens, but others' jobs require it too. Which of the following is NOT another population requiring training?

- ☐ Housekeepers exposed to BBPs as part of their job
- ☐ Custodial/Janitorial staff
- ☒ Construction facility staff
- ☐ Emergency first responders (police; first aid as part of job)

Question 7

1 / 1 pts

Hepatitis B vaccination provides protection for:

☐ Six months

☒ Life

☐ Ten years

☐ Two years

Question 8

1 / 1 pts

True or False? Personal protective equipment (PPE) will protect employees from all exposure incidents.

☒ False

☐ No answer text provided.

☐ True

☐ No answer text provided.

Question 9

1 / 1 pts

Which is NOT a category an employer is required to include in the facility-specific exposure control plan?

☐ Methods of compliance

☒ Attendance policy

☐ Communication to facility staff

- ☐ Hepatitis B vaccination

Question 10

1 / 1 pts

Why is the medical and reporting follow-up time frame six months in the event of an exposure incident?

- ☐ To allow time for the person to heal from hepatitis B infection
- ☒ To match the average time frame conversion from negative to positive for HIV
- ☐ To promote follow up before an employee quits or is terminated
- ☐ Because it takes that long for paperwork to find its way back to the employer

Question 11

1 / 1 pts

Regarding the hepatitis B vaccine, the employer:

- ☐ Is obligated to provide the employee with a copy of his/her vaccination record
- ☐ Can give the vaccine orally
- ☐ Can only charge the employee the cost of the vaccine, not the cost of employee time to prepare and administer the vaccine

Must provide the vaccine within ten days to new employees at risk of exposure to blood/OPIM

Question 12

1 / 1 pts

In an employer's exposure control plan, s/he is required to include a category called 'exposure determination'. This category is best described by which of the following?

Medical follow up after exposure

A mindset expected of your employer if

Methods by which an employee decides how bad an exposure was s/he is determined to avoid exposing employees

Jobs and tasks with greater than normal risk of blood or OPIM exposure

Question 13

1 / 1 pts

John Smith last attended an OSHA bloodborne pathogen training session on June 1st of the previous year. It is now July 1st of the current year. John's employer:

Is in violation of OSHA standards

Has 11 months to retrain John or will be in violation of OSHA standards

Has five months to retrain John or will be in violation of OSHA standards

Has met OSHA requirements for training on bloodborne pathogens

Question 14

1 / 1 pts

Employees exposed to blood or OPIM are asked to consider several things when deciding to take post-exposure preventative medications. Which of the following should the employee EXCLUDE when considering whether to take the medication?

Cost of preventative medication

If the person whose blood the employee is exposed to is known to have HIV or hepatitis infection

The status of worker's immune system

Type and amount of fluid to which the employee was exposed
